

The attractive and extremely durable Ecogenic Site Furnishings are probably the most earth-friendly benches, tables and site furnishings made. Recycled milk containers are purified into 100% high-density polyethylene. Color is molded all the way through the plastic, eliminating any concerns about fading. This material is used with galvanized steel flat bar that can be powder coated to create furnishings that are both colorful and contribute to the preservation of our natural resources.

## The Nova Bench without back
